For your eers™ only! | PCS-250

Enhanced Dual Driver with In-line Microphone

Experience the symphony!

The two dual driver speakers that act as the tweeter and woofer speakers within the PCS250 provides a high fidelity surround sound experience for any music aficionado. The speakers are tuned to provide a flat musician's response allowing music lovers to listen to the music the way it was recorded or to custom design the equalization on most entertainment devices. Micro balanced armature speakers, originally designed for the hearing aid industry are used to ensure unparalleled sound sensation. In other words, outstanding sound in an ear bud that is custom fit into the ear canal.

Miniaturization allows Sonomax to insert two speakers in tandem right into the canal of the earpiece. This proximity to the user's eardrum, when paired with the exclusion of ambient sound due to the custom fit acoustic seal provides the listener with unprecedented quality and clarity. It redefines high fidelity in listening. This seal allows the user to hear all aspects of the music at a lower volume than regular ear buds; thereby protecting the user's hearing.

The earphones incorporate a low profile, ergonomically shaped design and ear loop that comfortably cradles the back of the ear while guiding the user in proper insertion and removal. The user will also be able to answer phone calls on their Smartphone through the use of the integrated in-line microphone. Struggling to hear a phone conversation due to exterior noise is now eliminated due to the acoustically sealed earpiece. eers™ PCS-250 introduces a new kind of in-ear headphone that delivers superior fit and comfort while creating a safe listening environment. All this is done with a sleek design optimized for the sophisticated user. eers™ PCS-250 provides elite professional earphones that can be used in any environment while delivering an exceptional sound
