eers™

Custom-Fitted Earphones

For your eers™ only! | PCS-150

Enhanced Bass with In-line Microphone

A sensational sound experience

The PCS-150 delivers enhanced bass response through bass reflex technology with a tuned dynamic speaker. The sound quality is achieved through a patented speaker box enclosure used to tune a specific single driver dynamic speaker. The hermetically sealed speaker box, the sound port and the bass reflex vent, all combine to generate a rich sound sensation. With bass enhanced clarity and vivid sound throughout the full spectrum of the listening experience, the PCS 150 is the clear choice for sophisticated music lovers.

The patented SonoFit™ earpiece and Fitting System are designed to create an acoustic seal, ensuring that the user's choice of listening does not compete with ambient sound, irrespective of the environment. The user will have the same perceived listening experience while using a lower volume setting on their music source while using eers™, due to the inherent noise blocking of the SonoFit™ earpiece.

The eers™ low profile and custom fit is the logical choice for active users. Unlike bulky headphones or standard ear buds, the custom fit PCS-150 can be worn comfortably under any head gear and won't fall out during rigorous activity. Ideal for the jogger, biker or fitness guru, eers™ will be the answer to the user's most important requirements; comfort and sound.

Features

- Dynamic speaker for a crisp, detailed sound
- Excellent frequency response with hard driving bass
- Custom-fit eliminates discomfort and allows for earphones to stay put in any active situation
- Earloop secures positioning during the most extreme activities. They never fall out!
- In-line microphone compatible with most mobile devices
- The SonoFit™ Fitting System = Perfect fit GUARANTEED
- Noise reduction. Up to 26dB of noise attenuation
- For your eers™ Only!
